

**Device comprising a support base
and a handle or pestle
equipped with a force indicator**

3 interchangeable application heads
3 different shapes and sizes

A protective cover

to adapt on the base of the MyoDK

A suitcase

for storage and transport

Practice of the technique PCPTerapy
Use of the MyoDK device for PCPTerapy
Use of the MyoRK equipment for vacuum therapy

La certification qualité a été délivrée au
titre de la ou des catégories d'actions
suivantes : ACTIONS DE FORMATION

The MyoDK device

A Class I medical device,
effective and easy to use

A mechanical device,
specifically designed for
the application of positive
pressures according to the
PCPTerapy technique*,
by using the body force.

* see PCP Brochure

It is intended to relieve
the musculoskeletal pain
and to prevent and treat
pathologies of the
locomotor apparatus.

It allows to treat the
whole body in one
session.

Technical novelty

- Use of the body weight instead of hand force allows to relieve upper limbs and reduces the therapist's fatigue in his daily repetitive actions
- Indication of the level of the applied force to control the applied pressure
 - Patented application heads with multiple application points.

Use performance

- Portable device, storage in a lockable case
- Simple manual use, no setting
- Comfortable use: design with a support base, equipped with a protective cover, to use body weight and thus relieve his upper limbs
- Use flexibility in different positions and application methods allowing multiple uses for personalized and adapted treatments
- 3 interchangeable application heads (TAMs)
 - Quick connection and reliable connection
 - Ergonomics for a comfortable application
 - multiple pins working simultaneously for quick work on the whole body
- Possibility to combine PCPTherapy with the MyoDK device and vacuum therapy with the MyoRK equipment (see MRK Brochure)

Performance requirements

- Applied force: up to 250 N (25 kgf)
- Session duration: 20 min

Design safety

- Mechanical device offering most of the advantages of manual techniques
- Indicator displaying the level of the applied force allowing to determine the pressure pain threshold and to control the applied pressure

Application heads

- Different ergonomic shapes and sizes allowing to respect the different anatomical areas
- Equipped with several and wide pins allowing to both have multiple application points and a lower pressure on skin-contact surfaces and then to reduce the pain felt at the pressure
- Smooth surfaces for ease of decontamination
- Biocompatible material to avoid any biological risks

Clinical benefits

Relieve acute and chronic pain from the first sessions

- Reduction of the myofascial and tendinous tensions (general relaxation)
- Relaxation of muscles, including deep muscle
- Decrease of joint constraints
- Reduction of the pain (Increase of the pressure pain threshold)
- Increase of joint flexibility and mobility
- Posture improvement
- Quality of life improvement

Indications

- Back pain including low back pain and neck pain and joint pain
- Prevention, supporting and/or treatment of the pathologies of locomotor apparatus
 - Tendinitis,
 - Rachialgia (cervicalgia, dorsalgia, lombalgia),
 - Posture disorders
 - Fibromyalgia, ...
- Sport

Use safety

Use limited to the health professionals specialized in manual therapies after a specific training provided by RK INNOV (see the brochure on www.pcptherapy.com)
